Kuczewski S. On the Flow through Axial Compressors.

"O przepływie przez sprężarkę osłową". (Prace Inst. Mechan. No. 7).
Warszawa, 1953, PWT, 33 pp., 45 figs., 1 tab.

Description of phenomena (including those of space), occurring in the flow of common gas past cascade airfoils and in rotating blade passages. Review of phenomena influencing the aerodynamic coefficients of compressor blades. The author makes, in this connection, certain critical remarks based on his personal experience and referring to research hitherto carried out over the flow through axial compressors. His considerations are based on viscosity and compressibility. He rejects the principle and a complete compressor stage, due allowance being made for two-dimensional flow. The work contains an example of preliminary calculation of a compressor stage.

AUTHOR:

Kuczewski, Stanislaw

TITLE:

Method for designing the flow path in axial compressors

PERIODICAL:

Referativnyy zhurnal, otdel'nyy vypusk. 34. Kompresory i kholodil'naya tekhnika, no. 14, 1962, 8, abstract 34.14.59 (Prace Inst. techniciepl. vol. 9, no. 16, 1961, 1-19 [Polish]).

TEXT: A method of calculating and designing the flow path in axial compressors is described. A balance equation is derived for the energy flow through the rotor and stator blades, the energy losses, resulting from increased volume of the medium delivered due to deviations from the isentropic process, being (to a rough approximation) neglected. In order to improve analysis and evaluation of the compressor efficiency the concept is introduced of the relationship between axial and peripheral velocity, as well as of the ratio of compression energy in the rotor to the total energy transmitted. By resorting to the aerodynamic buoyancy (lift) coefficient C_y , the author derives an equation that links the flow kinematics of the working agent in the blading, with the required geometry and fastening angles of the blades. By integrating the equations for a blade element and applying to the principle of equal pressure-gain along the blade body approximate conditions for blade twisting are obtained. The possibility is shown of plotting compressor characteristics by means of the method described, assuming both constant rotational speed and variable delivery and variable

speed conditions. The shortcomings of previous experimental data are revealed and the necessity of further investigations is stressed upon. The method described is divided in two parts: the first part deals with general concepts on flow kinematics and energy balance, the second, with the geometrical design of the flow path under given conditions. Both parts are united by a common formula $C_y = 2C'u/\delta W_s$, where $C'u$ is the tangential component of peripheral velocity; δ is the degree of filling of blade disc; W_s is the mean geometrical value of relative velocity. With the following simplifying assumption, the equations derived are of particular importance: 1) rotational speed does not exceed the sound velocity; 2) the flow is of axisymmetrical nature; 3) the blades are designed so that the axial component of speed will be constant over the blade length outside the layer adjoining the walls; 4) the radial component of speed is negligibly small within the boundaries of the compressor flow-duct which results from the small convergence of the duct and the maintenance of radial equilibrium in various cross sections; 5) calculation is done according to average velocities. There are 8 figures and 2 references.

Title : Double Affination of Yellow Sugars from D and C Crystals.

Orig Pub: Gaz Cukrownicza, 58, No 12, 297-299 (1956) (in Polish)

Abstract: The authors describe a process which has been developed for the improvement of the quality of the white sugar produced in Polish sugar plants; the chief improvement consists in a reduction of the color of the product. The basic steps of the process are as follows: affination of the C sugar, mixing of the affinate with the massecuite from the second boiling, washing with steam and water, affination of the sugar

obtained, clarification, centrifugation, boiling, and washing with steam and water. The color of the mother liquor from the D and C crystals centrifugation has been reduced to 8°. Starnier [spelling uncertain]. The syrup obtained by blending the mother liquor with 15° green syrup has a color of 12.2°. The white sugar produced by the boiling of this syrup has a color not exceeding 0.3°. See also RZhKhin, 1957, 46501. -- D. Bronsteyn.

TOPIC TAGS: chemical synthesis, stereochemistry

ABSTRACT: The paper describes the synthesis of (+)-carene-4-one-3 from (+)-carene-4-ol-3 previously obtained by means of stereoselective synthesis. The crystalline carene-3-dione, 25 was isolated from the autoxidation products of (+)-carene-3. The IR spectra were recorded with UR10 spectrophotometer (Zeiss) in the Institute for Organic Chemistry and Biochemistry, CSAV, Prague, for which the authors thank Engineer J. Smolikova. The UV Spectra were recorded with a Unicam SP700 spectrophotometer in the Central Laboratory of the Chemistry Department, Technical College, Wroclaw, for which the authors thank Doctor A. Sobczyk for recording the spectra. Orig. art. has: 1 figure. [Orig. art. in German] [JPRS: 36,002]

175. ABSORPTION CAPACITY OF LIMONITE TOWARDS HYDROGEN SULPHIDE.
Svirski, A., Kuczynska, I. (Gaz. Wodn. Tech. Sanit. (Gas, Water, Sanit. Engng, Warsaw), Nov. 1955, vol. 29, 377, 378; abstr. in Ass. tech. Industr. Gaz Franco Circ. bibliogr., 15 Feb. 1956, (1), 12). The component of limonite which seems to play a predominant part in absorption of hydrogen sulphide is alpha iron hydroxide. Enrichment of 10% iron in the form of this hydroxide results in 100% increase in absorbed hydrogen sulphide. Limonite regeneration increases hydroxide content which improves absorption capacity for hydrogen sulphide still further. The residual free sulphur must be removed since it neutralises the action of the hydroxide.

"Uropepsin Activity in Urine of Patients with Gastric and Duodenal Ulcers, Treated with Injection of 'Pain Juice'."

Warsaw, Polski Tygodnik Lekarski, Vol 13, No 33, 12 Aug 63, pp 1221-1223

Abstract: [Authors' English summary modified] Uropepsin activity in the urine was studied in 40 patients with gastric and duodenal ulcers treated by injections of "pain juice" (gastric juice collected during paroxysm of pain), with determinations made before, during, and after injection. The decrease in the high uropepsin activity with the treatment differs in nature from that obtained in treatment with other methods, and authors speculate on the possible mechanisms of the "pain juice" action. 17 refs: 1 Czech, 3 Polish, 2 German, and 11 Western.
